

Integration Setup Guide

For: Ingrid — Client Onboarding & Automation System

Prepared by: Julius

This guide will help you securely connect your tools to **Make.com**, so your workflows (onboarding, quotations, and automations) run smoothly.

Each connection only needs to be done **once**, and all data stays inside your own accounts.

Calendly Setup

Purpose:

To trigger your automations automatically whenever a client books a meeting.

Steps:

1. Go to **<https://developer.calendly.com/>**
2. Log into your Calendly account.
3. Scroll to **Integrations** → **API & Webhooks** → **Generate Personal Access Token**, and click **Generate New Token**.
4. Copy the **API Token** and keep it handy (do not send it by message).
5. In **Make.com**, when adding the **Calendly connection**, you'll see two options:
 - **Simple Login:** Click **“Connect Calendly Account”** and log in directly.
 - **Advanced Option:** Click **“Show advanced settings”** (bottom-left corner) to connect using your **Client ID and Client Secret** if preferred.
6. If prompted for a **Redirect URL**, use this:
`https://www.integromat.com/oauth/cb/calendly`

Once connected, you'll see a confirmation in Make showing Calendly is active.

Google Workspace Setup

Purpose:

To allow Make to manage your Sheets, Drive folders, and optional Gmail automations.

Steps:

1. In **Make.com**, click **Add** → **Google Workspace connection**.
2. Sign in with your Google account when prompted.
3. Approve access to Google Sheets, Drive, and Gmail.

4. When the connection shows as “active,” the setup is complete.

WhatsApp (Meta Cloud API)

Purpose:

To enable automated WhatsApp messages (reminders, updates, or feedback follow-ups).

Steps:

1. Visit **<https://developers.facebook.com/>** and log in.
2. Go to **My Apps → Create App → Business App**.
3. Inside your new app, go to **WhatsApp → API Setup**.
4. Copy and save these details:
 - **Business Manager ID**
 - **WhatsApp Business Account ID**
 - **Phone Number ID**
 - **Permanent Access Token**
5. In **Make.com**, paste these into your WhatsApp connection settings when asked.

If this part feels tricky, we can handle it together over a short guided session.

Make.com Access

Purpose:

To allow me to configure, test, and activate all your workflows.

Steps:

1. In **Make.com**, go to **Team → Members → Invite New Member**.
2. Add my email as a collaborator.
3. Assign **Editor** access.

Final Notes

- Each connection is 100% private and remains under your control.
- You can revoke or update any integration anytime.
- Once everything is connected, I'll handle the entire automation build, testing, and workflow deployment.
